

## Universal Host Adapter

# UHA-8

Give yourself complete control over your kitchen with Renau's innovative UHA-8 Universal Host Adapter. This ultra-compact device allows fast, easy reprogramming of a Renau UHC-700 Series, UCM-700 Series, or HMC-10 Hybrid Micro Controller Module's stored configuration file as often as necessary to meet the ever-changing requirements of your specific application, virtually eliminating reprogramming labor costs and drastically reducing equipment down-time.

Like all Renau products, the UHA-8 is aesthetically pleasing and, due to its very small size, can be placed virtually anywhere on industrial equipment. This gives equipment designers incredible design flexibility while operators and customers see a sleek, elegant unit that can easily be mounted anywhere on the appliance, from door panels and edges to frames and more, eliminating expensive and complicated harnesses.

Insuring that your Renau controller will be easily upgradeable and fully reprogrammable, the UHA-8 allows recipe menus and system configurations to be quickly updated through custom Windows-based software and a standard USB flash drive. By using Renau's custom Windows Programming software, users

can easily create recipe menus, warning alarms, and system configurations that can be stored on an authorized user's hard drive for future use and reference or, for larger organizations, e-mailed to a remote colleague. When it comes time to update the system, users simply save the desired file onto a USB flash drive and reprogram the Renau controller with the use of a Renau UHA-8 adapter.

The UHA-8 also allows users to easily copy the configuration file from one Renau controller to another, allowing rapid scalability when new equipment is added. To copy a configuration file, simply insert a blank USB flash drive into the UHA-8 and in moments the configuration file currently loaded on your Renau controller will be copied to the flash drive, allowing for the same configuration file to be loaded on numerous pieces of equipment.

Designed with the foodservice industry's harsh environments specifically in mind, the UHA-8 is fully encapsulated for outstanding protection from extreme temperatures, humidity, and shock. Designed and manufactured in the USA, all Renau products are rigorously tested and come with an extended three year warranty.

### Dimensions:

- 1.85"W x 1.15"H x 1.8"D

### Features:

- Status LED
- USB Interface
- Operating Temperature: 0-80°C (32-176°F)

### Wide range of applications:

- Ideal for commercial foodservice equipment such as ovens, food warming/holding cabinets, fryers, refrigeration equipment, steamers, industrial machines, and more.

### Benefits:

- Designed specifically to work with Renau's UHC-700 Universal Hybrid Controller Series, UCM-700 Universal Control Module Series, and HMC-10 Hybrid Micro Controllers.
- Durable and reliable.
- Simple, inexpensive installation requires minimal panel space.
- Rapid updating of configuration file data including recipes, menus, warnings and alarms, and system configurations.
- Fast, convenient copying of configuration files.
- Fully-encapsulated for maximum protection in harsh environments.
- Low power consumption.

### Warranty:

- Every Renau product is thoroughly tested at numerous stages of production and comes with an extended three (3) year warranty.
